FOR IMMEDIATE RELEASE

### **Introducing The Proven Gen-Flex Knee™ – Designed with the Patient in Mind**

*October 29, 2007 McMurray, PA* – StelKast, Inc. is pleased to introduce the Proven Gen-Flex Knee to the orthopedic implant market. Comparing the Proven Gen-Flex Knee to the leading replacements, its narrower width reduces the potential for implant overhang and soft tissue impingement, therefore decreasing the likelihood that a patient will feel pain post-surgery.

“StelKast’s Proven Gen-Flex Knee takes gender flexibility to a new level for both the patient and physician. We are very excited to say that we offer a product that helps to eliminate patella entrapment and allows for happier and more comfortable patients. By designing with the patient in mind, we now have a product that conserves bone, is sized for flexibility and is smaller than the competition,” said John Reyher, General Manager.

The highly congruent design of the Proven Gen-Flex Knee reduces polyethylene stress to promote improved polyethylene wear for lasting reconstruction. The conforming design maintains contact and loading through range-of-motion and varus/valgus tilt and was designed in conjunction with The Hospital for Special Surgery, New York, NY.

StelKast is an orthopedic device company that specializes in the design, manufacture and distribution of total joint implants and instruments. StelKast offers a full line of hip and knee implants to cover primary surgeries along with an innovative revision knee system.

StelKast can be reached at (888) 273-1583 or by visiting the company’s website at [www.stelkast.com](http://www.stelkast.com).
